1 Introduction

Online communities have become very popular in sharing knowledge, ideas, skills or even experiences nowadays. So many people are relying on online communities to learn new things or choose one option over other. The use of online communities are increasing rapidly. So it's important to make sure that the knowledge base is not corrupted. In this paper we will introduce major fradulant activities which are frequently found in online communities and also propose different approaches to classify those fradulant activities properly.

2 Problem Definition

In this paper we are going to
